

2. Is the evolution theory proven?

**IT IS NOT
PROVEN.**

**IT HAS
INNUMERABLE
CONTRADICTIONS**

The evolution theory

**is that concept
according to which all
the species have
spontaneously
developed from
common ancestors.**

**THIS IS ONLY A
HYPOTHESIS
BASED ON
MATERIALISM.**

THE FACT IS:

There are small
genetic and bodily
variations within the
species.

Unproven hypothesis:

The changes can create
new traits and species.

**So,
what are then the „proofs”
of evolution?**

**Only the variously
interpreted natural and
paleontological
observations.**

The problems of evolution(1)

- The origin of life
- Contradictory life-trees
- Missing fossils, links
- Anomalous fossil-records

The problems of evolution(2)

- **Embryonic anomalies**
- **There are no observations of big scale changes**
- **Irreducible complexity**
- **The secret of biological information**

**What makes
the evolution
theory still
popular?**

Misleading
evolutionistic
propaganda.

Dishonest arguments (1)

- The unnoticed mixing of facts and assumptions
- Circular reasoning
- Gagging difficulties and alternatives

Dishonest arguments (2)

- Strongly exaggerated inferences, bluffs
- “Proofs” that doesn’t have proving strength
- Philosophical statements disguised as scientific

**„The evolution
theory“**

**IS AN UNPROVEN,
UNLIMITEDLY
IMPROBABLE SYSTEM
OF BELIEF.**
